The Progress

Finish the tasks of PA0 in Virtual Computer

The Reflections

This is my first time to get access to Linux system. There were many obstacles. At first, I tried to install this system directly on my computer. However, I failed after many attempts. By STFW, I learnt some knowledge about BIOS. However, I still need to be more patient to learn more. I still fail to figure out why there is no Debian option in the StartUp of BIOS.

Then I nearly destroyed my whole PAs because I clone the directory-ics2019 to the /home directory instead of the /home/username directory. An upper-classman reminded me about it when I was asking a question in the QQ group. God Bless! And I figure out that even a small difference and anomaly cannot be ignored.

The reason why I use English to write this report is because I failed to set the configuration to display Chinese in LaTeX. So I will continue to explore that.
